

IF your computer is slow in displaying your desktop try **PRESSING THE SPACE BAR 2-3 TIMES**. YOU will SEE YOUR SIGN IN DISPLAYED.

After that, your system should display your desktop (WINDOWS 10)

You are now working with your system. BUT YOU WILL FIND THE PROGRAM YOU ARE WORKING ON IS FROZEN-UP LET'S TRY THESE TIPS:

1. Press the **ESC key twice (located upper left of your keyboard)**
2. This might exit a stuck program.

STILL FROZEN:

TRY THIS: **PRESS Ctrl+Alt+Delete at the same time** that will restart your system.

If all of these does not work you have no other way but to do a **hard restart**.

TO DO A HARD RESTART:

**Press and hold the power button until it turns off**. Wait for about 15 seconds **THEN PRESS THE POWER BUTTON TO TURN ON**. (If no avail **contact computer club, we can help**)
